Jay Liu (Jie Liu)

Software Engineering | Enterprise AI & FinTech

Auckland, New Zealand · maxazure@gmail.com
jayliu.co.nz · linkedin.com/in/jayliuinvers · github.com/maxazure

Software engineer with more than 20 years of experience across enterprise systems, financial platforms and full-stack delivery. My current work combines financial-platform delivery at FNZ with independent projects in AI integration, agent tooling and reviewable business workflows. I build around reliable updates, traceable records and clear human review points.

Core technologies: C# / .NET, Python, TypeScript / React, REST APIs, SQL Server, PostgreSQL, MySQL, Git, Docker and Linux.

PROFESSIONAL EXPERIENCE

Analyst Developer
Oct 2022 - Present

FNZ Services (New Zealand) Limited

- Analyse requirements, implement and test application changes, investigate issues and support releases for financial-platform software.
- Work with analysts, developers, testers and wider delivery teams to deliver and maintain solutions.

Client assignments and implementation details are confidential.

Part-time IT Tutor
Feb - Jul 2022

Southern Institute of Technology

Taught IT709 Web Application Development (.NET 6) and IT501 Hardware.

Part-time Full Stack Developer
2020 - 2022

Guangzhou Yun Xiang Store Co., Ltd.

Developed and maintained invoicing and sales software for clothing retailers using .NET Core, REST APIs, MySQL, Vue.js and Bootstrap.

Full Stack Developer
2018 - 2021

Best IT Solution Ltd. / Hangzhou Xianbing Technology

Built web systems including an SMS reminder platform with Flask, REST APIs, MySQL, React, Redux and Ant Design.

Software Development Team Leader
2011 - 2017

Beijing Ruiyousi Information Technology Co., Ltd.

Led consulting and delivery for enterprise systems, middleware, server deployments and database architecture.

Information Technology Director
2008 - 2011

Beijing Dejian Hospital Management Co., Ltd.

Led development of a hospital management information system and managed delivery of 16 company websites.

Software Development Manager / .NET Software Engineer
2004 - 2008

Seeblue Co., Ltd. / Dingsheng Tech

Managed development of a pet portal; earlier work included .NET communication systems, middleware and company websites.

SELECTED INDEPENDENT PROJECTS

The following work is separate from my FNZ employment.

Enterprise CRM | Internal operational system

Problem: Customer relationships, projects, invoices and working notes need a consistent record when people and software agents both make updates.

Contribution: Designed and built the application, Python / FastAPI API and CLI around PostgreSQL, with structured business records and versioned Markdown notes.

Delivered: A shared internal workflow for business records and notes. Stable request keys prevent duplicate creates on retry; version checks reject stale edits; note revisions preserve earlier content. Source documents stay in a separate archive. People review conflicts and business decisions.

Evidence: jayliu.co.nz/projects/#crm-demo
Public walkthrough uses fictional data and a browser simulation. Production data and endpoints remain private.

NZ Accounting Assistant | Open-source workflow

Problem: Receipts and bank statements arrive in different formats, making it difficult to assemble a ledger without losing the source evidence.

Contribution: Built a reusable AI-agent skill and Python tooling for evidence capture, structured records, reconciliation and export.

Delivered: A documented workflow for Xero CSV exports and accountant review packs. Original evidence is retained, ambiguous matches stay visible, and final records and financial decisions require human review. No adoption or accuracy rate is claimed.

CodexView | Open-source developer tools

Problem: Coding agents emit different transcript formats, which makes tool calls and nested sessions harder to inspect consistently.

Contribution: Developed transcript adapters, React components and a Markdown CLI as reusable packages. Parsing is separated from presentation through a shared event model.

Delivered: Inspectable packages, usage examples and test fixtures for Codex CLI, Claude Code, OpenCode, AgentWeb codex-team and GitHub Copilot logs, including inline subagent transcripts where supported.
